The examining team reviewed P6 Study Text covers all the relevant ACCA P6 syllabus topics. It explores tax planning and ethics to help you begin applying the knowledge that you have gained to the type of questions you will find in the exam. The question and answer bank will also help you develop your application skills. The included questions are aimed to prepare you for the examination standard questions you will find in BPP Learning Media's Practice & Revision Kit.

Our Study Text is the only P6 text reviewed by the examiner. It covers the entire syllabus at just the right level. There is a chapter towards the end of the text devoted to tax planning and ethics. This chapter helps you to bridge the gap between acquiring the knowledge that you must have at this level and starting to apply that knowledge to the type of questions that you will meet. The question and answer bank will also be vital in helping you develop your application skills. The questions are at a level designed to aid your transition towards the examination standard questions that you will find in BPP Learning Media's Practice and Revision kit.

The examiner-reviewed P6 Practice & Revision Kit provides invaluable guidance on how to approach the exam and contains past ACCA exam questions for you to try to develop your application skills. Questions are grouped by topic so that you can easily identify what they cover. Detailed solutions provide tips, advise you how to approach questions and tell you how to gain easy marks. Examiner's comments tell you what the examiner is looking for in answers.

Macroeconomics in Context: A European Perspective lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. With a clear presentation of economic theory throughout, this latest addition to the bestselling "In Context" set of textbooks is written with a specific focus on European data, institutions, and historical events, offering engaging treatment of high-interest topics, including sustainability, Brexit, the euro crisis, and rising inequality. Policy issues are presented in context (historical, institutional, social, political, and ethical), and always with reference to human well-being. This book is divided into four parts, covering the following key issues: The context of economic analysis, including basic macroeconomic statistics and tools; The basics of macroeconomic measurements, including GDP, inflation, and unemployment, as well as alternative measures of well-being, and the particular structures of the European economies; Methods for analyzing monetary and fiscal policy, including an in-depth coverage of the instruments and approaches of the European central bank and some coverage of an open economy; The application of the tools learnt to selected macroeconomic issues, such as the euro crisis, the global financial crisis, public debt, global development, and environmental sustainability. Far more than any other existing macroeconomic textbook, this book combines real-world relevance of the topics covered with a strong focus on European institutions and structures within an approach that explains multiple economic paradigms. This combination helps to raise students' interest in macroeconomics as well as enhance their understanding of the power and limitation of macroeconomic analysis. This book discusses and summarizes the revived interest in reality issues (ontology) within accounting, economics, and the information sciences, with a view to informing scholars from these different disciplines about each other's endeavours in ontological research. Even more importantly, the book aims at familiarizing scholars from various disciplines with an evolutionary approach for examining questions about reality in the social sciences. The book is based on a partly pluralistic approach that assures unity in diversity. Unity, because all existence arises from physical reality; diversity, because emergent properties create biological and social realities that cannot be reduced to physical phenomena. Hence, the book recognizes not only concrete but also abstract entities. It shows, however, that the actualization of these abstract entities requires objectification and concrete manifestation. This pluralistic approach is central to this book. It also is a challenge to those who reject abstract entities as socially real, as well as to those who defend a non-realist position. The major task of this book is to explore proposals towards a uniform ontological basis. This uniform and universal presentation extends beyond traditional ontology (asking 'what is real?') to such questions as 'on which reality level is something real?' and 'in which (temporal and modal) way is it real?'. Such an extended analysis) is relevant to accountants, economists, information scientists, other social scientists as well as philosophers.
