""His tongue-in-cheek technical explanations here will have you howling with laughter ... ""--Daily Telegraph After being given yet another pointless ""man manual"" that told him fifty ways to tie a bow tie in under thirty seconds, James May, star of the international TV phenomenon Top Gear, was certain guys needed a different kind of book. This book, in fact. He reckons there are nine vital things that a true man should be able to do. Not stuff you can download from the Internet, but really important things.

To understand the operation of aircraft gas turbine engines, it is not enough to know the basic operation of a gas turbine. It is also necessary to understand the operation and the design of its auxiliary systems. This book fills that need by providing an introduction to the operating principles underlying systems of modern commercial turbofan engines and bringing readers up to date with the latest technology. It also offers a basic overview of the tubes, lines, and system components installed on a complex turbofan engine. Readers can follow detailed examples that describe engines from different manufacturers. The text is recommended for aircraft engineers and mechanics, aeronautical engineering students, and pilots.

An exploration of the Airbus fly-by-wire flight control laws that become active when Normal law can no longer function. A follow on to Airbus A330 Normal Law.

Check your work and reinforce your understanding with this manual, which contains complete solutions for all odd-numbered exercises in the text.
