Politics (from Greek: *politiká*, 'affairs of the cities') is the set of activities that are associated with making decisions in groups, or other forms of power relations between individuals, such as the distribution of resources or status. The academic study of politics is referred to as political science.. It may be used positively in the context of a "political solution ...

This open access book was prepared as a Final Publication of the COST Action IC1406 “ High-Performance Modelling and Simulation for Big Data Applications (cHiPSet) “ project. Long considered important pillars of the scientific method, Modelling and Simulation have evolved from traditional discrete numerical methods to complex data-intensive continuous analytical optimisations. Resolution, scale, and accuracy have become essential to predict and analyse natural and complex systems in science and engineering. When their level of abstraction raises to have a better discernment of the domain at hand, their representation gets increasingly demanding for computational and data resources. On the other hand, High Performance Computing typically entails the effective use of parallel and distributed processing units coupled with efficient storage, communication and visualisation systems to underpin complex data-intensive applications in distinct scientific and technical domains. It is then arguably required to have a seamless interaction of High Performance Computing with Modelling and Simulation in order to store, compute, analyse, and visualise large data sets in science and engineering. Funded by the European Commission, cHiPSet has provided a dynamic trans-European forum for their members and distinguished guests to openly discuss novel perspectives and topics of interests for these two communities. This cHiPSet compendium presents a set of selected case studies related to healthcare, biological data, computational advertising, multimedia, finance, bioinformatics, and telecommunications.

Psychotherapy research is undoubtedly one of the most puzzling, diverse, complex, controversial, and multidimensional areas tackled by clinical psychologists, psychiatrists, and psychiatric social workers. The numerous theoretical, methodological, and clinical-research issues dealt with by workers in the field have increased exponentially in the past three decades. To do full justice to the area, monographs in each of the specific subareas would be warranted. In this volume, we, as editors, have endeavored to present the student and interested professional and practitioner with an understanding of the most salient issues and trends confronted by the psychotherapy researcher. In order to accomplish this task, we asked our colleagues, who are experts in their respective areas, to share their current thinking with us and with you, the readers. Thus, many theoretical viewpoints are represented, with none having a monopoly over the others. This is as it should be, given the data collected by clinical researchers at this time. We have also attempted to capture the excitement that has permeated the field in the past 30 years or so.

The cutting-edge, scientifically accurate, definitive book on the most popular behavioral issues that cats face In the United States, one of the predominant reasons that owners abandon or give up their pets (often leading to euthanasia) is because of unwanted behaviors. Many have tried to instruct proper cat training, but this is the first book of its kind to provide an in-depth understanding of the underlying reasons for a cat's problem behavior, the essential key to unlocking the best for your cat and avoiding pitfalls. Decoding Your Cat gives owners new insight on promoting their cat's physical and psychological health and wellness

and maintaining a long and fulfilling relationship together. Written by the leading experts in cat behavior from the American College of Veterinary Behaviorists, with an introduction by animal expert Steve Dale, this book conveys the newest and best information on cat behavioral science in a fun, interesting, and understandable way. Together with anecdotes from real life situations and the science behind how cats relate to their world, *Decoding Your Cat* empowers owners to provide a home environment that is happy, safe, and functional, to identify and seek treatment for medical health problems, to understand how to deal with unwanted behaviors, and in general to help cats live longer and fuller lives.

This textbook provides an overview of research on the biological basis of memory. The book will be of use to cognitive scientists, biologists, and psychologists, and to undergraduate students seeking an expanded coverage of the neurobiology of memory for courses in learning and memory or behavioral and cognitive neuroscience.

Uncertainty surrounds the use of publicity as a means of controlling corporate crime. On the one hand, some agree with Justice Brandeis's dictum that light is the best of disinfectants...the most efficient policeman. On the other hand, many believe that corporations' internal affairs are effectively shrouded with a thick fog that prevents the light of public scrutiny from reaching them. *The Impact of Publicity on Corporate Offenders* is the first study to go beyond the rhetoric, through an examination of corporate experience. Fisse and Braithwaite have carried out a qualitative inquiry concerning 17 large corporations involved in publicity crises. Based mainly on interviews, the inquiry includes company employees and former employees, union officials, officers of government regulatory agencies, competitors, independent accountants, government prosecutors, public interest activists, judicial officers, stockbrokers, and other experts.

This book constitutes the refereed proceedings of the 4th International Conference on Digital Economy, ICDEc 2019, held in Beirut, Lebanon, in April 2019. The conference was founded in 2016 to discuss innovative research and projects related to the support role of Information System Technologies in the digital transformation process, business innovation and e-commerce. The 31 papers presented in this volume were carefully reviewed and selected from 89 submissions. The theme of ICDEc 2019 was "Digital Economy: Emerging Technologies and Business Innovation". The papers were organized in topical sections named: digital transformation; e-finance; social media communication; intelligent systems; e-commerce and business analytics; e-learning and cloud education; e-commerce and digital economy; data science; digital marketing; and digital business model.

From S. M. Stirling, the "master of speculative fiction" (*Library Journal*) and the author of the New York Times bestselling *Novels of the Change*, comes a new vision, as a man battles the dark forces of the world—including those in his own blood... Aeons ago, *Homo nocturnus* ruled the Earth. Possessing extraordinary powers, they were the source of all manner of myths and legends. Though their numbers have been greatly reduced, they exist still—though not as purebreds. Adrian Brézé is one such being. Wealthy and reclusive, he is more Shadowspawn than human. He rebelled against his own kind, choosing to live as an ordinary man, fighting against his darker nature. But Adrian's sister is determined to bring back the reign of the Shadowspawn, and now she has struck him at his weakest point by kidnapping his human lover, Ellen. To save Ellen—and perhaps all of humanity—Adrian must rejoin a battle he swore he would never fight again.

New from the New York Times bestselling author of *A Taint in the Blood*. Adrian Brézé defied

his own dark heritage as a near-purebred Shadowspawn for years, until his power-hungry sister Adrienne kidnapped his human lover Ellen. Now, Adrienne is dead, and the Council of Shadows is gathering its strength. To stop the Council from launching an apocalypse, Adrian and Ellen must ally with the Brotherhood, a resistance group dedicated to breaking the Council's hold on humankind...by any means necessary. In the coming confrontation, Adrian must fight not only the members of the Council but also his own nature-and, as he will come to suspect, traitors within the Brotherhood itself...

A unique, holistic approach covering all functions and phases of pharmaceutical research and development While there are a number of texts dedicated to individual aspects of pharmaceutical research and development, this unique contributed work takes a holistic and integrative approach to the use of computers in all phases of drug discovery, development, and marketing. It explains how applications are used at various stages, including bioinformatics, data mining, predicting human response to drugs, and high-throughput screening. By providing a comprehensive view, the book offers readers a unique framework and systems perspective from which they can devise strategies to thoroughly exploit the use of computers in their organizations during all phases of the discovery and development process. Chapters are organized into the following sections: * Computers in pharmaceutical research and development: a general overview * Understanding diseases: mining complex systems for knowledge * Scientific information handling and enhancing productivity * Computers in drug discovery * Computers in preclinical development * Computers in development decision making, economics, and market analysis * Computers in clinical development * Future applications and future development Each chapter is written by one or more leading experts in the field and carefully edited to ensure a consistent structure and approach throughout the book. Figures are used extensively to illustrate complex concepts and multifaceted processes. References are provided in each chapter to enable readers to continue investigating a particular topic in depth. Finally, tables of software resources are provided in many of the chapters. This is essential reading for IT professionals and scientists in the pharmaceutical industry as well as researchers involved in informatics and ADMET, drug discovery, and technology development. The book's cross-functional, all-phases approach provides a unique opportunity for a holistic analysis and assessment of computer applications in pharmaceuticals.

This book aims to provide an introduction to the major techniques of chemoinformatics. It is the first text written specifically for this field. The first part of the book deals with the representation of 2D and 3D molecular structures, the calculation of molecular descriptors and the construction of mathematical models. The second part describes other important topics including molecular similarity and diversity, the analysis of large data sets, virtual screening, and library design. Simple illustrative examples are used throughout to illustrate key concepts, supplemented with case studies from the literature.
