The papers contained herein were presented at the First International Conference on Composite Structures held at Paisley College of Technology, Paisley, Scotland, in September 1981. This conference was organised and sponsored by Paisley College of Technology in association with The Institution of Mechanical Engineers and The National Engineering Laboratory (UK). There can be little doubt that, within engineering circles, the use of composite materials has revolutionised traditional design concepts. The ability to tailor-make a material to suit prevailing environmental conditions whilst maintaining adequate reinforcement to withstand applied loading is unquestionably an attractive proposition. Significant weight savings can also be achieved by virtue of the high strength-to-weight and stiffness-to-weight characteristics of, for example, fibrous forms of composite materials. Such savings are clearly of paramount importance in transportation engineering and in particular aircraft and aerospace applications. Along with this considerable structural potential the engineer must accept an increased complexity of analysis. All too often in the past this has dissuaded the designer from considering composite materials as a viable, or indeed better, alternative to traditional engineering materials. Inherent prejudices within the engineering profession have also contributed, in no small way, to a certain wariness in appreciating the merits of composites. However, the potential benefits of composite materials are inescapable. The last two decades have seen a phenomenal increase in the use of composites in virtually every area of engineering, from the high technology v vi Preface aerospace application to the less demanding structural cladding situation.

In this book Dr. Michael Stankosky, founder of the first doctoral program in knowledge management, sets out to provide a rationale and solid research basis for establishing Knowledge Management (KM) as an academic discipline. While it is widely known that Knowledge is the driver of our knowledge economy, Knowledge Management does not yet have the legitimacy that only rigorous academic research can provide. This book lays out the argument for KM as a separate academic discipline, with its own body of knowledge (theoretical constructs), guiding principles, and professional society. In creating an academic discipline, there has to be a widely accepted theoretical construct, arrived at by undergoing scholarly scientific investigation and accompanying rigor. This construct becomes the basis for an academic curriculum, and proven methodologies for practice. Thus, the chapters in this book bridge theory and practice, providing guiding principles to those embarking on or evaluating the merits of a KM program. As a methodology itself for undertaking the development of a body of knowledge, a KM Research Map was developed to guide scholars, researchers, and practitioners. This book presents this map, and showcases cutting-edge scholarship already performed in this nascent field by including the dissertation results of eleven KM scholar/practitioners.

Easy to use hot work permits log to monitor and keep records of all your hot work permits. Product information: Introductory page on the first page to personalize log. Index Pages to keep track of Log. Date Permit No Contractor Address Phone No Email Location Work Description Permit Issue Date Permit Expiry Date Equipment(s) To Be Used Work Start Date Work Finish Date Notes. Thank you.

Developing countries face the challenge of maintaining economic growth and socio-economic development, at the core of which sits the construction industry. Considerable research on construction in developing countries took place in the 1970's and 1980's, but little since, a gap which this book fills. Including contributions from prominent academics and practitioners in Australia, China, the Netherlands, Portugal, Singapore, South Africa, Switzerland, and the UK, this is a truly international analysis of a subject of global interest. The most insightful and relevant of recent research on topics such as Millennium Development Goals, the informal construction sector, human resource development, technology, finance and social change, are all addressed in the context of the construction industry in the developing world. Also considered are other key aspects of construction industry development such as institution building, nurturing of contractors and consultants and championing of industry development programmes. While the challenge has grown and the needs have become even more pressing, the research to date has rarely presented effective solutions. Focussing on those aspects of the construction industry most crucial to development, this is a much needed up-to-date study that sheds new light on a variety of concepts and issues. This is essential reading for researchers, professionals and students interested in the construction industry in developing countries. Readers of this book will be interested in its companion volume; Contemporary Issues of Construction in Developing Countries.
