Moulding Masterclass is a compilation of technical articles by plastics injection moulding industry expert John Goff, originally written for magazine publication between October 2009 and July 2013. According to the author, injection moulding processes are frequently developed in the early stages of a product's launch and never revisited. Particularly in today's challenging economic climate where manufacturing costs need to be minimised, it is more important than ever that time is devoted to process optimisation. This collection of 32 articles takes the reader through many aspects of the injection moulding process, from the influence of screw design and speed on melt plasticization, flow and shot consistency, through injection and holding time and pressure, gate sizing, runner systems, mould cooling, clamp forces, systematic process control and more. Each discussion combines theory with recommendations and practical examples seen in diverse manufacturing environments. John Goff has almost 40 years' experience of injection moulding and has seen all sides of the process, having been a senior university lecturer, process engineering manager, consultant and trainer. He has written numerous books and articles, presenting complex technical information in a simple, coherent fashion.

Although many textbooks deal with a broad range of topics in the power system area of electrical engineering, few are written specifically for an in-depth study of modern electric power transmission. Drawing from the author's 31 years of teaching and power industry experience, in the U.S. and abroad, Electrical Power Transmission System Engineering: Analysis and Design, Second Edition provides a wide-ranging exploration of modern power transmission engineering. This self-contained text includes ample numerical examples and problems, and makes a special effort to familiarize readers with vocabulary and symbols used in the industry. Provides essential impedance tables and templates for placing and locating structures Divided into two sections—electrical and mechanical design and analysis—this book covers a broad spectrum of topics. These range from transmission system planning and in-depth analysis of balanced and unbalanced faults, to construction of overhead lines and factors affecting transmission line route selection. The text includes three new chapters and numerous additional sections dealing with new topics, and it also reviews methods for allocating transmission line fixed charges among joint users. Uniquely comprehensive, and written as a self-tutorial for practicing engineers or students, this book covers electrical and mechanical design with equal detail. It supplies everything required for a solid understanding of transmission system engineering.

CONGRATULATIONS TO HERBERT KROEMER, 2000 NOBEL LAUREATE FOR PHYSICS For upper-division courses in thermodynamics or statistical mechanics, Kittel and Kroemer offers a modern approach to thermal physics that is based on the idea that all physical systems can be described in terms of their discrete quantum states, rather than drawing on 19th-century classical mechanics concepts.

Stanley Kubrick, director of the acclaimed films *Path of Glory*, *Spartacus*, *Lolita*, *Dr. Strangelove*, *2001: Space Odyssey*, *A Clockwork Orange*, *The Shining*, and *Full Metal Jacket*, is arguably one of the greatest American filmmakers. Yet, despite being hailed as "a giant" by Orson Welles, little is known about the reclusive director. Stanley Kubrick—the first full-length study of his life—is based on assiduous archival research as well as new interviews with friends, family, and colleagues. Film scholar Vincent LoBretto provides a comprehensive portrait of the director, from his high school days, in the Bronx and his stint as a photographer for *Look* magazine, through the creation of his wide-ranging movies, including the long-awaited *Eyes Wide Shut*. The author provides behind-the-scenes details about writing, filming, financing, and reception of the director's entire output, paying close attention to the technical innovations and to his often contentious relationships with actors. This fascinating biography exposes the enigma that is Stanley Kubrick while placing him in context of film history.

A guide to the many simple, effective, and inexpensive measures that can reduce the prevalence and severity of anaemia caused by hookworm infection. The main aim is to help practitioners, working in the field, know how to detect infection and associated anaemia, and then implement appropriate measures, whether for individual cases or entire communities. In view of the widespread tendency to underestimate the importance of hookworm infection and accord it low priority, the book also performs a persuasive function, documenting the major public health consequences of hookworm anaemia, illustrating the striking results of control measures, and encouraging scientists to take a greater interest in this challenging disease. To this end, descriptions of the simple measures available for control are placed within the context of the many complex factors that guide their selection and determine their effectiveness. Because confirmation of infection is so simple, chapters on prevention and control concentrate on information that can help health workers know when to suspect infection and then carry out the relevant detective work. Different control strategies described include standard case management, targeted treatment, mass treatment, and supplementary iron distribution. For standard case management, readers are given detailed advice on the best drugs and doses for iron therapy and anthelmintic treatment, which form the foundation for hookworm anaemia control.

Intestinal infection continues to be a major problem worldwide to which helminths make an enormous contribution with billions of individuals currently affected. Like the first volume - which covered bacterial, viral and protozoan infections of the gut - this book brings together clinical descriptions of disease and up-to-date guidance on management with important basic helminth infection. The contributors are an international panel of experts - with expertise as clinical and laboratory investigators and many of whom have a continuing active research interest in those parts of the world where these infections are most common. This companion volume produces serves as a complete text on enteric infection. The book should be of value to infectious disease physicians, microbiologists, gastroenterologists, general physicians and hospital specialists, as well as basic scientists working on all aspects of intestinal infection.

Since its initial publication, this highly respected book has provided students with a much needed critical review of the major research paradigms in the social sciences and the logics or strategies of enquiry associated with them. *Approaches to Social Enquiry* draws together a vast body of literature from the philosophy of science, the philosophy of social science, social theory and research methodology. It focuses on questions such as: How is new social scientific knowledge produced or existing knowledge further developed? What status does this knowledge have and how can this be established? To what extent can the ways of advancing knowledge in the natural sciences be used in the social sciences? What major dilemmas do social researchers face in the development of new knowledge? No other text offers such a clear and accessible, but still rigorous, account of these sometimes complex debates. This second edition has been thoroughly updated to encompass the most contemporary debates about the conduct and underpinnings of social research. More attention is also paid to research practice. In addition, integrated empirical examples have been included to illustrate and extend the philosophical and theoretical discussion. *Approaches to Social Enquiry* will be invaluable to advanced undergraduate and graduate students who are planning their own research or studying research methods, and to researchers across a wide range of disciplines.

This book constitutes the refereed proceedings of the 8th International Conference on Web Reasoning and Rule Systems, RR 2014, held in Athens, Greece in September 2014. The 9 full papers, 9 technical communications and 5 poster presentations presented together with 3 invited talks, 3 doctoral consortial papers were carefully reviewed and selected from 33 submissions. The conference covers a wide range of the following: semantic Web, rule and ontology languages, and related logics, reasoning, querying, searching and optimization, incompleteness, inconsistency and uncertainty, non-monotonic, common sense, and closed-world reasoning for the web, dynamic information, stream reasoning and complex event processing, decision making, planning, and intelligent agents, machine learning, knowledge extraction and information retrieval, data management, data integration and reasoning on the web of data, ontology-based data access, system descriptions, applications and experiences.
