This exciting new text teaches the foundations of electric circuits and develops a thinking style and a problem-solving methodology that is based on physical insight. Designed for the first course or sequence in circuits in electrical engineering, the approach imparts not only an appreciation for the elegance of the mathematics of circuit theory, but a genuine "feel" for a circuit's physical operation. This will benefit students not only in the rest of the curriculum, but in being able to cope with the rapidly changing technology they will face on-the-job. The text covers all the traditional topics in a way that holds students' interest. The presentation is only as mathematically rigorous as is needed, and theory is always related to real-life situations. Franco introduces ideal transformers and amplifiers early on to stimulate student interest by giving a taste of actual engineering practice. This is followed by extensive coverage of the operational amplifier to provide a practical illustration of abstract but fundamental concepts such as impedance transformation and root location control—always with a vigilant eye on the underlying physical basis. SPICE is referred to throughout the text as a means for checking the results of hand calculations, and in separate end-of-chapter sections, which introduce the most important SPICE features at the specific points in the presentation at which students will find them most useful. Over 350 worked examples, 400-plus exercises, and 1000 end-of-chapter problems help students develop an engineering approach to problem solving based on conceptual understanding and physical intuition rather than on rote procedures.

We revisit Lipset ' s law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

Jace Jamison is every woman's fantasy. He's a mysterious businessman willing to sweep you off your feet, a tattooed bad boy from the wrong side of the tracks, and a sexy friend you want to take that next step with. Jace is everything and anything you want him to be. He's a highly paid escort. But nobody knows who Jace really is; the man whose dad abandoned him, whose brother was killed, and who had to take care of his mom at a young age. At the age of nineteen, he was living in Sin City, ready for a life away from stress and struggle. Adrienne has been having a sexual drought since she broke up with her boyfriend. Even then she wasn't getting fully satisfied. Being an event planner, she's constantly working at numerous events. Several times she's seen a man she can only refer to as the God-like creature at her work functions. He's devastatingly handsome, tall, and has beautiful eyes, but he's always with a different woman. The last thing she needs is another player in her life. After a few chance encounters with Jace, her best friend convinces her to just get some good sex out of him and not worry about who she's seen him with. But what happens when she finds out that he isn't dating these women because he wants to, but because he's paid to? Keeping his job a secret from Adrienne seems easy at first, but when she begins meeting people he knows in his escort life, and they begin getting closer, he knows he has to tell her before someone else does. When their worlds entwine, and confessions are made, will they be able to work through it? Will she be able to push aside his sins and focus on the good in him? Will Jace get what he's never had? A woman who wants him despite what he's done. Or will living in sin cost him what he never knew he wanted?

Based on biographical data on more than 2,500 individuals in China's thirty provincial units from the beginning of the People's Republic in 1949, this is the most comprehensive and systematic treatment of China's provincial leaders ever published. The study presents detailed accounts of four categories of provincial leaders - party secretaries, deputy party secretaries, governors, and vice governors - including age, gender, nationality, hometown, education, party membership, and length of membership. It also traces the careers of these leaders in terms of promotion, demotion, transfer, and retirement. And using sophisticated statistical analysis, it links the political mobility of these leaders to the economic performance of their provincial units.
