In recent years, the question of war and sacrifice has been a major topic of political debate and controversy. If our country goes to war for reasons we endorse, what is our responsibility to share in its sacrifices? Does supporting a war mean serving in it? Does it mean encouraging our children to do so? Such questions have been posed by the so-called "chickenhawk" phenomenon: pro-war leaders and their pro-war children who call on Americans to assume the burden of war and its sacrifices, but avoid those sacrifices themselves. President Bush and other architects of the Iraq conflict were the most prominent chickenhawks. Cheyney C. Ryan argues that the chickenhawk issue is not just a matter of personalities;it will remain with us for a long time even though the Bush administration has left office. Ryan poses fundamental questions of war and personal sacrifice, pointing to the basic disconnection in American politics generally between the support for war and the willingness to assume its costs, which he calls "Alienated War." Calling for the reinvigoration of civic involvement, this illuminating and insightful book offers both a philosophical and historical exploration of America's citizen-soldier tradition and the consequences involved in separating the citizenry from the armed forces.

Stroke is a major cause of death and the major cause of adult neurological disability in most of the world. Despite its importance on a population basis, research into the genetics of stroke has lagged behind that of many other disorders. However, the situation is now changing. Anincreasing number of single gene disorders causing stroke are being described, and there is growing evidence that polygenic factors are important in the risk of apparently "sporadic" stroke.Stroke Genetics provides an up-to-date review of the area, suitable for clinicians treating stroke patients, and both clinical and non-clinical researchers in the field of cerebrovascular disease. The full range of monogenic stroke disorders causing cerebrovascular disease, including ischaemicstroke, intracerebral haemorrhage, aneurysms and arteriovenous malformations, are covered. For each, clinical features, diagnosis, and genetics are described. Increasing evidence suggest that genetic factors are also important for the much more common multifactorial stroke; this evidence isreviewed along with the results of genetic studies in this area. Optimal and novel strategies for investigating multifactorial stroke, including the use of intermediate phenotypes such as intima-media thickness and MRI detected small vessel disease are reviewed. The book concludes by describing apractical approach to investigating patients with stroke for underlying genetic disorders. Also included is a list of useful websites.

Horse Feeding and Nutrition is the fourth in a series of books on animal feeding and nutrition that focuses on horse feeding and nutrition, aiming to assist in world food production. Organized into 20 chapters, the book contains basic information on horse industry, feeding problems, and importance in food production of proper horse nutrition. The introductory chapters discuss the importance of the horse industry; the art, science, and myths in feeding horses; the problems involved in supplying an adequate level of nutrients in horse rations; and the digestion of feeds. Chapters 5-10 cover concise, up-to-date summaries on macro- and micronutrients, including vitamins, minerals, protein, and water. The book goes on, examining the important interrelationships between nutrition, disease, and performance; the relative value of various feeds in horse rations; and the value of pasture and hay for horses. Chapters 15-18 focus on feeding the foal, growing horses; the performance and race horses; and the mares and stallions. The final chapters discuss purified rations for horses, antibiotics, founder, learning ability, feeding behavior, nutrient toxicity, weight equivalents, weight-unit conversion factors, and the effect of cold weather on horses. The book provides information helpful to beginners and experts in horse production. It will also be valuable for county agents, farm advisors, consultants, veterinarians, and teachers of vocational agriculture, as well as animal science students and teachers.
