This book brings together, in one convenient place, all the relevant material on the process of Adjudication in Construction. It will provide clarity for those involved in the adjudication process, or related proceedings, in the form of a detailed and reliable text that supports each proposition with a statutory provision or a judicial observation. Included in this book is a summary of the different procedures adopted in other jurisdictions, as well as a chronological account of the reviews and proposals for reforms made to Part II of the Housing Grants, Construction and Regeneration Act 1996. There is also an explanation of the payment procedures under the statutory framework. Finally, readers will be able to make use of appendices comprised of the statutory material, the various contractual adjudication procedures currently available, and necessary forms. Any lawyers or construction professionals involved in Adjudication will find this book to be a clear and comprehensive aid to their practice.

The building sector contributes up to 40 per cent of greenhouse gas emissions, mostly from energy use during the life time of buildings. Identifying opportunities to reduce these emissions has become a priority in the global effort to reduce climate change. This publication provides an overview of current knowledge about greenhouse gas emissions from buildings, and presents opportunities for their minimisation.

As an industrial process, construction is unique. The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries, due to the design of buildings being bespoke and the sites being geographically varied. The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase, so a good understanding of the methods of procurement, the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry. Much has changed in the global construction industry since publication of the second edition of Building Procurement, for example the increase in debt burden of many major economies, widespread adoption of Building Information Modelling (BIM) Technology in the industry and the United Kingdom's exit from the European Union. This new edition has been rewritten to take account of these significant developments,

but at its core it continues to provide a critical examination and review of current procurement practices in the UK, continental Europe (including EU procurement procedures), China, Middle East and Sub-Saharan Africa and the USA. It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate. Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management.

Now in its second edition, Construction Law is the standard work of reference for busy construction law practitioners, and it will support lawyers in their contentious and non-contentious practices worldwide. Published in three volumes, it is the most comprehensive text on this subject, and provides a unique and invaluable comparative, multi-jurisdictional approach. This book has been described by Lord Justice Jackson as a "tour de force", and by His Honour Humphrey Lloyd QC as "seminal" and "definitive". This new edition builds on that strong foundation and has been fully updated to include extensive references to very latest case law, as well as changes to statutes and regulations. The laws of Hong Kong and Singapore are also now covered in detail, in addition to those of England and Australia. Practitioners, as well as interested academics and post-graduate students, will all find this book to be an invaluable guide to the many facets of construction law.
