Research Paper (postgraduate) from the year 2017 in the subject Medicine - Public Health, grade: 1, Egerton University (Public Health), language: English, abstract: Pregnancy and childbirth phenomena are considered to be among the most fundamental issues in one 's life. These are the early stages of life and, they seem to be delicate and difficult to manage. Currently, there are a number of sophisticated medical procedures, which appear to have eliminated pain and increased the safety of the mother and child. In the past, pregnancy and delivery were some of the most painful ordeals to women and, could result into death at times, owing to pregnancy complications. As a result, healthcare professionals in public and private healthcare facilities are currently administering heavy drug doses to pregnant mothers, especially during delivery to hasten labor and suppress pain. However, they have adopted this new approach to evade lawsuits related to the medical ethics, in case they perform delivery with fatal outcome. Alternatively, homeopathy has currently emerged as the most appropriate approach towards addressing the enormous health challenges associated with conventional medical procedures. Therefore, this research will give an overview of homeopathy and its relevance in pregnancy, childbirth and after parturition.

This compact book is designed to provide a practical, quick, clinical reference guide that birth attendants can easily slip into their birth bags. Seventy-five key remedies are briefly summarized for their applications in midwifery practice or self care. Prenatal problems, complications arising during labor and birth, and postpartum complaints of both mom and baby are covered. The newly updated 5th edition features an expanded therapeutic applications or repertory section designed to facilitate expedient choice of a remedy during labor. Written by a midwife for midwives, mothers, and anyone who works with pregnant, birthing, or breastfeeding moms and their babies.

"The most common personality types recognized by homeopathic practitioners are brought to life in this new book by an insightful physician and homeopath. These thirty-five typologies are described in light of common behaviors, primary emotional tendencies, internal conflicts, and spiritual issues that each of them face. This book is essential for serious students and practitioners of homeopathic medicine, and it will be of use as well to homeopathic patients or anyone interested in typology research."
