Sir James Prescott Joule (1818-1889) became one of the most significant physicists of the nineteenth century, although his original interest in science was as a hobby and for practical business purposes. The son of a brewer, he began studying heat while investigating how to increase the efficiency of electric motors. His discovery of the relationship between heat and energy contributed to the discovery of the conservation of energy and the first law of thermodynamics. Volume 1 of Joule's scientific papers was published in 1884. It is organised chronologically and reveals the range of Joule's interests and the development of his thought. The topics of the papers include the measurement of heat, voltaic batteries, electromagnets, specific heat, meteorology and thermodynamics. Joule's careful experiments in these areas were fundamental to the development of significant areas of twentieth-century physics, although he was slow to gain recognition from his contemporaries.

This guide to scientific writing provides a systematic look at the causes of reader frustrations.

This book constitutes the refereed proceedings of the International Conference, UNESST 2011, held as Part of the Future Generation Information Technology Conference, FGIT 2011, Jeju Island, Korea, in December 2011. The papers presented were carefully reviewed and selected from numerous submissions and focus on the various aspects of u- and e-service, science and technology.

Given that scientific material can be hard to comprehend, sustained attention and memory retention become major reader challenges. Scientific writers must not only present their science, but also work hard to generate and sustain the interest of readers. Attention-getters, sentence progression, expectation-setting, and OC memory offloadersOCO are essential devices to keep readers and reviewers engaged. The writer needs to have a clear understanding of the role played by each part of a paper, from its eye-catching title to its eye-opening conclusion. This book walks through the main parts of a paper; that is, those parts which create the critical first impression. The unique approach in this book is its focus on the reader rather than the writer. Senior scientists who supervise staff and postgraduates can use the book to review drafts and to help with the writing as well as the science. Young researchers can find solid guidelines that reduce the confusion all new writers face. Published scientists can finally move from what feels right to what is right, identifying mistakes they thought were acceptable, and fully appreciating their responsibility: to guide the reader along carefully laid-out reading tracks."

This book captures the diversity and richness of writing as it relates to different forms of abilities, skills, competencies, and expertise. Psychologists, educators, researchers, and practitioners in neighboring areas are interested in exploring how writing develops and in what manner this development can be fostered, but they lack a handy, unified, and comprehensive source of information to satisfy their interest. The goal of this book is to fill this void by reflecting on the phenomenon of writing from a developmental perspective. It contains an integrated set of chapters devoted to issues of writing: how writing develops, how it is and should be taught and how writing paths of development differ across writing genres. Specifically, the book addresses typologies of writing; pathways of the development of writing skills; stages of the development of writing; individual differences in the acquisition of writing skills; writing ability and disability; teaching writing; and the development and demonstration of expertise in writing.

Explains how to write simply and directly, describes the basics of organization, and briefly reviews grammar and punctuation
