There are many walks of life in which teamwork is found and in which, by common consent, it could be better. Yet even the most basic questions about teams remain unresolved. What makes a group of individuals a team? Does teamwork involve a special type of reasoning? What makes teams successful? How do we learn to be team players? This volume brings together, for the first time, contemporary research from across the social sciences, addressing such questions from a variety of theoretical and empirical perspectives.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

This concise paperback helps develop students' critical thinking skills through exercises keyed to the main topics in introductory psychology.
