This book tells the story of how John Egan gradually overcame the odds and, piece by piece, rebuilt this great company, winning over the workforce, the overseas dealers and, most important of all, the customers. Working with Margaret Thatcher and her Government, Egan and his team of managers overcame every obstacle, every set-back, every challenge. Again and again, it looked impossible. Yet using innovative techniques, intelligence, eloquence, openness, motor racing and much more, they saved this most charismatic company which has created some of the finest and most loved motor cars of all time.It is an amazing story that will appeal equally to car enthusiasts, those in business and readers interested in social history.

Embark on an enchanting journey into our country's past hundred years through the remarkable life of Captain Sir Tom Moore THE NO. 1 SUNDAY TIMES BESTSELLER 'A wonderful life story with lessons for us all . . . beautifully written' DAILY TELEGRAPH 'Gloriously enthralling' DAILY MAIL _____ Captain Sir Tom Moore's story is all our stories . . . Born at the tail end of the Spanish flu epidemic, Tom Moore was raised in the Yorkshire Dales by a loving family that had not escaped tragedy. Yet when the clouds of war threatened, Tom raised his hand and joined up to fight. The Second World War took him to the Far East, where his can-do spirit was forged. Whether fighting for his life in Burma or helming a firm back home, racing motorbikes or raising a family, he always sought to do his very best. To make a difference to those around him. Captain Tom's story is that of our parents and our grandparents. It is the story of the past hundred years here in Britain. _____ 'Engaging . . . His upbeat nature shines through and reminds us how much worse this year would have been without him' Evening Standard 'A wonderful read. Captain Tom is a beacon of light, and hope, and positivity' Piers Morgan, Life Stories, ITV 'A great book' Good Morning Britain 'A beautiful book. We have so much to learn from Captain Sir Tom' Chris Evans, Virgin Radio 'Fascinating. It's the life story of an ordinary man who is extraordinary' Michael Ball, BBC Radio 2

When gasoline prices rise, people notice: the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden. Yet, raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency-improving policies we could implement in the transportation sector. This dissertation brings new evidence to bear on quantifying the responsiveness to changing gasoline prices, both on the intensive margin (i.e., how much to drive) and the extensive margin (i.e., what vehicles to buy). I assemble a unique and extremely rich vehicle-level dataset that includes all new vehicle registrations in California 2001 to 2009, and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations. Using this dataset, I quantify the responsiveness to gasoline price changes on both margins, as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization, where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility-consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies, including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions, with more responsiveness than in many recent studies in the literature. I estimate a medium-run (i.e., roughly two-year) elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium-run elasticity of driving with respect to the price of gasoline around -0.15 for new personal vehicles in the first six years. Older vehicles are driven much less, but tend to be more responsive, with an elasticity of roughly -0.3. I find that the vehicle-level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic, and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving preference tend to bias the elasticity of driving away from zero -- implying a greater responsiveness than the true responsiveness. This is an important methodological point, for much of the literature estimating similar elasticities ignores these two issues. These results have significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions, but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary, but even economic efficiency-improving. However, I find that the welfare changes from an increased gasoline tax vary significantly across counties in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the ``rebound effect'' of a policy that works only on the extensive margin, such as a feebate or CAFE standards, may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.

"This book should be given to every female driver as a part of getting their license." Amazon Reader Review According to society's gender roles, fixing cars is a man's job. Not anymore. Certified mechanic and auto business owner Audra Fordin has a mission: educate and empower every female driver in the country. Auto safety is a public health issue. Don't take my word for it. According to the CDC, traffic accidents are among the top 10 causes of death in the United States. Who wants to be a part of that statistic? Not me!"End Auto Anxiety" is an action-packed glove box guide. Buy now and discover:* What to Do When Your Car Breaks Down * Why You Should Never Ask for a Tune Up * 14 Things Smart Drivers Keep in Their Car * 5 Common Causes of the Check Engine Light * How Working on Cars Made Me a Stronger Woman * The Power of Prevention: How to Protect Your InvestmentAfraid you'll be bored? Don't worry. Audra writes in a fun and friendly tone. As an Amazon reviewer said, "Audra does a great job of defining scary sounding auto terms, and presenting the material in a way that is understandable and relatable."

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers intergerating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of auto- tive development - the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road s- face via gearboxes, transmission shafts and wheels, which together with spri- damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

This book provides an analysis of the luxury industry in two of the world's biggest and evolving markets, and identifies and discusses the key issues and dynamics in transforming their luxury landscapes. By discussing the elements that are most likely to dominate boardroom agendas, the pragmatic implications for both strategic and marketing planning are made clear. Special emphasis is placed upon well-contemplated responses to luxury brand marketing challenges that executives are likely to face as they push their brands to adapt and thrive in these shifting markets.
