This is a festschrift including nine scientific papers and six abstracts of papers written by Dr. Gerard Rushton or his former graduate students and colleagues to celebrate his retirement from teaching at the University of Iowa, Iowa City, Iowa, USA. The festschrift begins with Rushton's own review of his research advances in Behavioral Geography, Economic

Geography and Health Geography that coincide with three recurring phases of his academic career during 45 years of teaching at the University of Iowa.

Following this, each paper by a former student or colleague reviews the special personal and academic contributions of Rushton to him or her in one of those research areas. Each paper then proceeds to review the author's (or authors') contributions to scientific theory and empirical analysis that he or she (or they) has(ve) subsequently advanced or evolved from Rushton's original contributions. These papers are scientific contributions of interest to an academic readership, as opposed to personal or anecdotal recollections.

oriented introduction to population geography. After grounding students in the fundamentals, K. Bruce Newbold then explains the tools and techniques commonly used to describe and understand population concepts using real-world issues and events. Drawing on both US and international cases, he explores such pressing concerns as HIV/AIDS, international migration, fertility, mortality, resource scarcity, and conflict. Every chapter includes methods and focus sections, as well as study questions, to provide a more in-depth discussion of the ideas and concepts developed in the book. In addition, a wide array of maps, tables, and figures illustrates and enhances the cases. Newbold highlights the geographical perspective—with its ability to provide powerful insights and bridge disparate issues—by

emphasizing the role of space and place, location, regional differences, and diffusion. Arguing that an understanding of population is essential to prepare for the future, this cogent text will provide upper-division undergraduates with a thorough grasp of the field.

In a globalizing world, frontiers may be in flux but they remain as significant as ever. New borders are established even as old borders are erased. Beyond lines on maps, however, borders are spatial zones in which distinctive architectural, graphic, and other design elements are deployed to signal the nature of the space and to guide, if not actually control, behaviour and social relations within it. This volume unpacks how manipulations of space and design in frontier zones,

historically as well as today, set the stage for specific kinds of interactions and convey meanings about these sites and the experiences they embody. Frontier zones organize an array of functions to facilitate the passage of goods, information, and people, and to define and control access. Bringing together studies from Asia, Africa, the Middle East, Europe, and North America, this collection of essays casts a wide net to consider borders of diverse sorts. Investigations of contemporary political frontiers are set within the context of examinations of historical borders, borders that have existed within cities, and virtual borders. This range allows for reflection on shifts in how frontier zones are articulated and the impermanence of border emplacements, as well as on likely

scenarios for future frontiers. This text is unique in bringing together a number of scholarly perspectives in the arts and humanities to examine how spatial and architectural design decisions convey meaning, shape or abet specific social practices, and stage memories of frontier zones that no longer function as such. It joins and expands discussions in social science disciplines, in which considerations of border practices tend to overlook the role of built form and material culture more broadly in representing social practices and meanings.

Time-geography is a mode of thinking that helps in the understanding of change in society, the wider context and ecological consequences of human actions. This book presents its assumptions, concepts and methods, and example applications. The intellectual path of the Swedish geographer Torsten Hägerstrand is a key foundation for this book. His research contributions are shown in the context of the urbanization of Sweden, involvement in the emerging planning sector and empirical studies on Swedish emigration. Migration and innovation diffusion studies paved the way for prioritizing time and space dimensions and recognizing time and space as unity. From these insights time-geography grew. This book

includes the ontological grounds and concepts as well as the specific notation system of time-geography – a visual language for interdisciplinary research and communication.

Applications are divided into themes: urban and regional planning; transportation and communication; organization of production and work; everyday life, wellbeing and household division of labor; and ecological sustainability – time-geographic studies on resource use. This book looks at the outlook for this developing branch of research and the future application of time-geography to societal and academic contexts. Its interdisciplinary nature will be appealing to postgraduates and researchers who are interested in human geography, urban and regional planning and sociology.

This book examines the textile and clothing Industry of India and its trade scenario from a global perspective. New developments in international policies related to trade and investment and falling barriers to trade worldwide as well as within individual regional communities have transformed the structure of production and global competition in the textile and apparel industries across the world. Furthermore, with the incorporation of textile trade in the GATT framework following the removal of quantitative restrictions, and the subsequent liberalization of investment opportunities, the Indian market is now home to several

international brands, which has led to the present upsurge of FDI in this very important sector of the Indian economy. The book closely examines the nature and impact of such external changes on the industry's structure and labour-related issues. The key feature of this book is that it presents a snapshot of all the domestic and international policies related to this sector, from the earliest relevant period to the present, and analyses the topical issues in significant detail. The book also offers some empirical analyses to show the impact of external changes on the concentration of firms in this industry and the regional inequalities that have emerged from regional variations in firms' employment, labour-income and profit levels. Further, it addresses another striking feature, namely the

role of preferential trading blocs or Regional Trading Arrangements (RTA) in creating trade-diverting effects related to this sector apart from the implications of foreign collaborations and cross-border mergers and acquisitions. Many economists fear that the benefits of these RTAs for the partner countries are much greater than those for India, with net gains of incremental exports from India being small or even negative. This book discusses these critical issues in the context of India's textile and apparel trade.

The European economic crisis has been ongoing since 2008 and while austerity has spread over the continent, it has failed to revive economies. The media have played an important ideological role in presenting the policies of economic and political elites in a favourable light, even if the latter's aim has been to shift the burden of adjustment onto citizens. This book explains how and why,

using a critical political economic perspective and focusing on the case of Ireland. Throughout, Ireland is compared with contemporary and historical examples to contextualise the arguments made. The book covers the housing bubble that led to the crash, the rescue of financial institutions by the state, the role of the European institutions and the International Monetary Fund, austerity, and the possibility of leaving the eurozone for Europe's peripheral countries. Through a systematic analysis of Ireland's main newspapers, it is argued that the media reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis.
