This series was created to afford serious students of Western music the opportunity of relating the component parts of the music they have played, that is, melody, harmony, rhythm, phrasing and structure. The harmonic vocabulary has been introduced in a logical order using melodic lines and examples from a wide variety of composers, periods, styles and media. Companion volumes encourage creative discussion of the music examples, more time for sight reading and more time for keyboard harmony.

Modernism in music still arouses passions and is riven by controversies. Taking root in the early decades of the twentieth century, it achieved ideological dominance for almost three decades following the Second World War, before becoming the object of widespread critique in the last two decades of the century, both from critics and composers of a postmodern persuasion and from prominent scholars associated with the ‘new musicology’. Yet these critiques have failed to dampen its ongoing resilience. The picture of modernism has considerably broadened and diversified, and has remained a pivotal focus of debate well into the twenty-first century. This Research Companion does not seek to limit what musical modernism might be. At the same time, it resists any dilution of the term that would see its indiscriminate application to practically any and all music of a certain period. In addition to addressing issues already well established in modernist studies such as aesthetics, history, institutions, place, diaspora, cosmopolitanism, production and performance, communication technologies and the interface with postmodernism, this volume also explores topics that are less established; among them: modernism and affect, modernism and comedy, modernism versus the ‘contemporary’, and the crucial distinction between modernism in popular culture and a ‘popular modernism’, a modernism of the people. In doing so, this text seeks to define modernism in music by probing its margins as much as by restating its supposed essence.

The 1990s work of six British composers forms the focus of this collection of essays, arising from a conference that took place at University of Surrey Roehampton in February 1999. The composers whose music is discussed are James Dillon, Thomas Ad Harrison Birtwistle, Jonathan Harvey, Edwin Roxburgh and Sebastian Forbes. Reflecting the aims of the conference, this volume brings together composers and musicologists to discuss significant works from the last decade of the twentieth century, and also some of the wider issues surrounding British music. Arnold Whittall and Julian Johnson provide perspectives on the plurality of contemporary British music. Edwin Roxburgh offers a personal account of ‘The Artists’ Dilemma’, whilst the essays that follow explore aspects of musical form and structure in a variety of works. The second half of the book comprises interviews with most of the composers whose music is discussed in Part I, adding a further dimension to our understanding of the preoccupations of British composition at the end of the twentieth century.

"[Western Music and Its Others] will be taken as an important book signalling a new turn within the field. It takes the best features of traditional, rigorous scholarship and brings these to bear upon contemporary, more speculative questions. The level of theoretical sophistication is high. The studies within it are polemical and timely and of lasting scholarly value."--Will Straw, co-editor of Theory Rules: Art as Theory/ Theory and Art "The great value of this collection lies in the wealth of questions that it raises--questions that together crystallize the recent concerns of musicology with force and clarity. But it also lies in the authors' resistance to the easy 'postmodernist' answers that threaten to turn new musicology prematurely grey. The editors' comprehensive, intellectually adventurous introduction exemplifies the sort of eager yet properly skeptical receptivity to scholarly innovation that fosters lasting disciplinary reform. It alone is worth the price of the book." --Richard Taruskin, author of Stravinsky and the Russian Traditions: A Biography of the Works Through " Mavra" "When cultural-studies methods first appeared in musicology 15 years ago, they triggered a storm of polemics that sometimes overshadowed the important issues being raised. As the canon wars recede, however, scholars are finding it possible to focus on the concerns that led them to cultural criticism in the first place: the study of music and its political meanings. Western Music and Its Others brings together leading musicologists, ethnomusicologists, and specialists in film and popular music to explore the ways European and North American musicians have drawn on or identified themselves in tension with the musical practices of Others. In a series of essays ranging from examination of the Orientalist tropes of early 20th-century Modernists to the tangled claims for ownership in today's World Music, the authors in this collection greatly advance both our knowledge of specific case studies and our intellectual awareness of the complexity and urgency of these problems. A timely intervention that should help push music studies to the next level." --Susan McClary, author of Conventional Wisdom: The Content of Musical Form (2000) "This collection provides a sophisticated model for using theory to interrogate music and music to interrogate theory. The essays both take up and challenge the dominance of notions of representation in cultural theory as they explore the relevance of the concepts of hybridity and otherness for contemporary art music. Sophisticated theory, erudite scholarship and a very real appreciation for the specificities of music make this a powerful and important addition to our understanding of both culture and music." --Lawrence Grossberg, author of Dancing in Spite of Myself

Bringing together work by music theorists, musicologists and ethnomusicologists, this book explores how musical notions of East and West are constructed and utilized by composers. It re-evaluates the many ways East Asian composers have contributed to developments in 20th-century music.

This is the latest updated edition of the University of Cambridge's official statutes and Ordinances.

This classic sociological examination of art as collective action explores the cooperative network of suppliers, performers, dealers, critics, and consumers who—along with the artist—“produce” a work of art. Howard S. Becker looks at the conventions essential to this operation and, prospectively, at the extent to which art is shaped by this collective activity. The book is thoroughly illustrated and updated with a new dialogue between Becker and eminent French sociologist Alain Pessin about the extended social system in which art is created, and with a new preface in which the author talks about his own process in creating this influential work.

My doctoral thesis has involved two related tasks. The first was to analyse Zoltán Kodály’s philosophy of music education and, on this basis, to develop a computer-assisted instruction method (CAI) for teaching music theory and solfège (ear-training). The second task was to experiment with the effectiveness of this method and compare it with traditional approaches to teaching. Many student find music theory and ear training difficult. During the 1990s, in connection with my licentiate thesis “Solfège in the Computer Classroom” (2000), I initiated this research project, and developed a CAI method for teaching music theory and solfège. I wanted to see just how useful Kodály’s approach could be in computer-aided teaching and learning. The results show that the Kodály approach can be successfully applied to the development of a computer-aided solfège programme and the Kodály system is applicable to new learning environments and teaching practices. In music education CAI is an area with great potential for development. It offers multiple learning options and can enhance students’ motivation to study music theory and ear-training; some of the learning outcomes were even better than with the traditional ways of learning. The results also show, however, that the teacher-pupil interaction is essential in a computer-aided learning programme.

Today’s music theory instructors face a changing environment, one where the traditional lecture format is in decline. The Routledge Companion to Music Theory Pedagogy addresses this change head-on, featuring battle-tested lesson plans alongside theoretical discussions of music theory curriculum and course design. With the modern student in mind, scholars are developing creative new approaches to teaching music theory, encouraging active student participation within contemporary contexts such as flipped classrooms, music industry programs, and popular music studies. This volume takes a unique approach to provide resources for both the conceptual and pragmatic sides of music theory pedagogy. Each section includes thematic “anchor” chapters that address key issues, accompanied by short “topics” chapters offering applied examples that instructors can readily adopt in their own teaching. In eight parts, leading pedagogues from across North America explore how to most effectively teach the core elements of the music theory curriculum: Fundamentals Rhythm and Meter Core Curriculum Aural Skills Post-Tonal Theory Form Popular Music Who, What, and How We Teach A broad musical repertoire demonstrates formal principles that transcend the Western canon, catering to a diverse student body with diverse musical goals. Reflecting growing interest in the field, and with an emphasis on easy implementation, The Routledge Companion to Music Theory Pedagogy presents strategies and challenges to illustrate and inspire, in a comprehensive resource for all teachers of music theory.
