Neonatal Resuscitation guidelines. Major concepts in the 2020 Neonatal Resuscitation guidelines are the same as in the 2015 guidelines. Changes include a new look for the algorithm and the addition of 10 take-home messages. There is an emphasis on skills development and practice to improve PPV. “ PPV has been an emphasis of NRP (Neonatal ...

Updates to neonatal, pediatric resuscitation guidelines ...

The Neonatal Resuscitation ILCOR and Guidelines Task Forces continue to support use of a 3:1 ratio of compressions to ventilation, with 90 compressions and 30 breaths to achieve approximately 120 events per minute to maximize ventilation at an achievable rate 173 – 178 (Class IIa, LOE C-LD). Thus, each event will be allotted approximately a half of a second, with exhalation occurring during the first compression after each ventilation.

It may be reasonable to stop resuscitation for newborns with an Apgar score of 0 after 10 minutes of optimal resuscitation; however, the decision to stop resuscitation should be individualized . If spontaneous respiration is not seen or Apgar scores of 1 to 3 at 20 minutes of age in newborns with greater than 34 weeks of gestation, it may be reasonable to stop resuscitation in settings with limited resources [ 9 ].

This pocket book contains up-to-date clinical guidelines, based on available published evidence by subject experts, for both inpatient and outpatient care in small hospitals where basic laboratory facilities and essential drugs and inexpensive medicines are available. It is for use by doctors, senior nurses and other senior health workers who are responsible for the care of young children at the first referral level in developing countries. In some settings, these guidelines can be used in the larger health centres where a small number of sick children can be admitted for inpatient care.

Covering the management of critically ill newborns from the first minute of life through the first 72 hours, this practical, evidence-based and clinically-informed guide will provide all members of the pediatric care team with the essential information to save lives and prevent disability. With chapters on neonatal transport, resuscitation, ventilation and ethical issues, the content is further illustrated with case studies illustrating the real-world aspects of identifying critical signs and symptoms, diagnostics and treatment in multiple settings. As well as including numerous clear diagrams and summary tables, the text includes algorithms based on international guidelines to help navigate the reader through the delivery of care, and a comprehensive listing of drugs and dosages, serving as a quick reference guide when making treatment decisions. This is essential reading for pediatric residents, fellows and junior faculty, neonatal intensive care nurses, paramedics, obstetricians, midwives, anesthesiologists and emergency medicine physicians.

this concise book covers all aspects of neonatal resuscitation from the moment of birth to transfer to the neonatal unit. It discusses special considerations, and communication with parents and other professionals. The advice has been drawn up by a working party, giving it the authority of a distinguished body of specialists.
