Course Overview This course introduces those with critical infrastructure duties and responsibilities at the State, local, tribal, and territorial levels to the information they need and the resources available to them in the execution of the mission to secure and improve resilience in the Nation's critical infrastructure. Course Objectives: At the end of this course, the participants will be able to: -Summarize critical infrastructure responsibilities. -Identify the range of critical infrastructure government and private-sector partners at the State, local, tribal, territorial, regional, and Federal levels. -Describe processes for effective information sharing with critical infrastructure partners. -Identify various methods for assessing and validating information. Primary Audience This course is designed for all individuals with critical infrastructure protection responsibilities. Prerequisites None. The following are recommended prior to starting the course: -Review of the National Infrastructure Protection Plan (NIPP) and Critical Infrastructure Support Annex to the National Response Framework (NRF) documents. OR-Completion of the following Independent Study courses: -IS-860.a, National Infrastructure Protection Plan and -IS-821, Critical Infrastructure Support Annex.

IS-7 Course Overview This independent study course provides a basic understanding of the roles and responsibilities of the local community, State, and the federal government in providing disaster assistance. It is appropriate for both the general public and those involved in emergency management who need a general introduction to disaster assistance. CEUs: 1.0 Course Length: 10 hours

Meant to aid State & local emergency managers in their efforts to develop & maintain a viable all-hazard emergency operations plan. This guide clarifies the preparedness, response, & short-term recovery planning elements that warrant inclusion in emergency operations plans. It offers the best judgment & recommendations on how to deal with the entire planning process -- from forming a planning team to writing the plan. Specific topics of discussion include: preliminary considerations, the planning process, emergency operations plan format, basic plan content, functional annex content, hazard-unique planning, & linking Federal & State operations.

"This course is for emergency managers and related professionals working with all types of volunteers and coordinating with voluntary agencies. [It] provides procedures and tools for building and working with voluntary organizations."--Page 4 of cover.

Course Overview This independent study course prepares students to successfully assume the role and responsibilities of a Geospatial Information System (GIS) Specialist during a disaster situation. As they complete this course, students will learn how to use their GIS skills to support other members of a Joint Field Office (JFO) disaster response and recovery team and successfully meet the responsibilities assigned to them. Students will also learn what types of products need to be produced and what procedures must be followed to ensure that products are produced correctly and in a timely manner. Course Objectives: -Recognize the role a GIS Specialist performs while supporting a response and recovery operation -Identify likely sources of information and data within FEMA and the emergency management community -Identify the types of products commonly needed by FEMA programs and decision makers during an operation -Recognize best practices for establishing and maintaining data flow, products and timelines during an incident -Recognize how to appropriately handle and protect licensed, sensitive, or personal data -Recognize how to use Remote Sensing products Primary Audience This course is designed primarily for GIS Specialists newly employed with FEMA or other emergency response organizations. Students should already have a basic working knowledge of standard GIS software applications. Prerequisites Prior to completing this course, it is highly recommended that the student have: -Opened the Geospatial Information System Specialist (GISP) task book, or -Held the equivalent position in the NRCC/RRCC (when developed) Students must also have basic geospatial knowledge and skills, including: -Knowledge of how to make a map and other geospatial products -Knowledge of basic analytics -Knowledge of the basic fundamentals of cartography and geospatial terminology -The ability to use standard GIS software and equipment such as: -ESRI's ArcGIS software, including Spatial Analyst -Adobe products -Google Earth -Large format printers -Microsoft Office suite -Handheld GPS devices -Modeling and decision support software such as HAZUS -Computers Note: Students may come to FEMA with prior geospatial training and knowledge, or it may be developed through on-the-job training or courses.

Course Overview This course is designed to foster an overall culture of risk management throughout the DHS workforce. While providing awareness of the fundamental concepts of risk management, the course will prepare employees to manage risk at home, in the workplace, and the community and provide them

with a foundation for further development in the area of risk management. Course Objectives: Upon completion of this course, you should be able to: -Recognize the value of risk management. -Explain how the fundamental concepts and principles of risk management apply at home, in the workplace, and in the community. -Explain how the DHS Risk Management Cycle utilizes logical reasoning and critical thinking to address risk management problems. -Describe how risk management alternatives are developed and evaluated in order to support better decisions to effectively manage risk. -Explain how and why the management of risk is one of the fundamental strategies adopted by DHS in meeting mission performance expectations. -Describe the characteristics of effective risk communication.

Course OverviewThis course describes the role, design, and functions of Emergency Operations Centers and their relationships as components of a multi-agency coordination system. The course contains disaster-related examples, activities and case studies that relate to EOC's and multi-agency coordination systems at the local, state and federal levels of government.Course Objectives:At the end of the course, students should be able to: *Relate EOC operations to National Incident Management System (NIMS) requirements.*Describe the role that EOCs play in overall multiagency coordination.*Describe the relationship between the EOC and the on-scene Incident Command System (ICS) structure.*Identify staffing, information, systems, and equipment needs at the EOC.*Determine whether participants' EOC organizations are conducive to effective coordination.*Identify potential alternate locations suitable for EOC operations should the primary EOC facility become damaged or inoperable.*Create a test, training and exercise plan for critical EOC operations. *Develop a strategy and schedule for reviewing EOC resource requirements and technology needs.

ICS 100, Introduction to the Incident Command System, introduces the Incident Command System (ICS) and provides the foundation for higher level ICS training. This course describes the history, features and principles, and organizational structure of the Incident Command System.

Instructor Guide for the FEMA course to become a CERT team member. It contains the same information as the pdf which can be downloaded from FEMA.gov at no cost. This book contains additional helpful tabs and pages for notes.

"The objective of this report is to identify and establish a roadmap on how to do that, and lay the groundwork for transforming how this Nation- from every level of government to the private sector to individual citizens and communities - pursues a real and lasting vision of preparedness. To get there will require significant change to the status quo, to include adjustments to policy, structure, and mindset"--P. 2.
