For the accomplished EVP, COO, CFO or other business executive struggling in position to understand IT as a business unit, this is a brief, understandable guide to help you better embrace your powerful team. Structured for clarity, the guide includes an overview of information technology past and present, what you should expect from your direct report within IT (and what to look for should a replacement be needed), the standard structure of an IT unit, and high-level overviews on ERP and data-driven decision-making conversations. Each explains just enough to help you walk into any room prepared for next-level conversations. It's important to acknowledge that we live in a reality where half of our nation's top technology leaders, including Chief Information Officers and Vice Presidents of Information Technology, report to positions at least one level removed from a company's Chief Executive Officer (CEO) or President. As a technology leader myself, I choose to lean into that statistic and offer help and guidance to those non-technical leaders that take ownership of, with enthusiasm and trepidation, the industry that I love so much. Demystifying IT: A Pocket Guide for the Non-Technical is geared toward executives who have (or have had, or seek to eventually have) an IT department within their scope of responsibility. The message and value begs to be consumed with intention as not understanding what's possible of technology today from an executive-level viewpoint is a misstep. Whether you realize it or not, if you read-to-understand,

At a high-level, the oversight of an information technology team is all very understandable and learnable for a non-technical executive. To get there, you need to embrace this opportunity to learn about what you're leading. If you've ever waived off increased knowledge of technology due to its inherent complexity or a general lack of interest, I promise to deliver new knowledge in just the right amount of layman's terms that are certain to result in value for you.

successful technology startup building its Web-based business from scratch. Vinay Trivedi—a private equity analyst and startup entrepreneur who works at the intersection of business and tech—employs the startup story line as his frame for explaining in plain language the technology behind our daily user experiences, the successful strategies of social media giants, the bold aspirations of tiny startups, and the competitive adaptations of ordinary businesses of all sizes and sectors. Along the way, he demystifies all those tech buzzwords in our business culture whose precise meanings are so often elusive even to the people using them. Internet hardware, application software, and business process: the working premise of this book is that none of it is beyond the basic understanding of nontechnical business readers. Trivedi peels back the mystery, explains it all in simplest terms, and gives his readers the wherewithal to listen intelligently and speak intelligibly when the subject turns to technology in business.

Unlike more technical texts stuffed with formulae and theories, this book explains in plain English how power is created and replaces formulae with everyday examples and easy-to-understand illustrations. It opens with an explanation of how electricity is generated, then covers the planning and development of electric power stations, emphasizing modern considerations of merchant power plants, repowering, and the growth of gas turbine generation. The "facts" of generation are covered in part two--boilers, turbines, generators, hydro and pumped storage, and "alternative" generations sources, suchs geothermal, tidal, solar, and wind. Maintenance and operations are covered in basic overview format. Finally, environmental considerations--again, an increasing concern in light of deregulation and environmental law--are reviewed. In addition, the authors cover specific features and fuel-types

Many 21st century operations are characterised by teams of workers dealing with significant risks and complex technology, in competitive, commercially-driven environments. Informed managers in such sectors have realised the necessity of understanding the human dimension to their operations if they hope to improve production and safety performance. While organisational safety culture is a key determinant of workplace safety, it is also essential to focus on the non-technical skills of the system operators based at the 'sharp end' of the organisation. These skills are the cognitive and social skills required for efficient and safe operations, often termed Crew Resource Management (CRM) skills. In industries such as civil aviation, it has long been appreciated that the majority of accidents could have been prevented if better non-technical skills had been demonstrated by personnel operating and maintaining

the system. As a result, the aviation industry has pioneered the development of CRM training. Many other organisations are now introducing non-technical skills training, most notably within the healthcare sector. Safety at the Sharp End is a general guide to the theory and practice of non-technical skills for safety. It covers the identification, training and evaluation of non-technical skills and has been written for use by individuals who are studying or training these skills on CRM and other safety or human factors courses. The material is also suitable for undergraduate and post-experience students studying human factors or industrial safety programmes.
