¶This book will arm and inspire you to transform your underwater photographs, whatever camera you use:: Alex Mustard (from the Foreword) The best underwater images don't just capture the subject well, they also capture mood, emotion and atmosphere. Unlike most other underwater photography books, Winning Images with Any Underwater Camera focuses on composition and techniques rather than the all-consuming camera technology that people tend to chase first. This makes it a supremely cost-effective tool for improving images; and there is no discrimination between users of different camera systems ¶ this truly is a book for all. International award winner and instructor Paul Colley reveals the short cuts and shows the vital bits of artistic theory as it applies to underwater photography, grappling with composition in much greater depth than in other books. He also includes easy-to-remember reference models for underwater composition: pre-planned concepts for twelve typical underwater scenes, with the principal considerations boiled down to those essentials that will help you achieve great results, time and again.

This guide to on- and off-camera flash picks up where Peterson's "Understanding Exposure" leaves off, helping free photographers from the limitations of auto to get the images they want when natural light isn't enough.

In the half century after the Second World War, oncology has developed greatly both in the world and in China. There are three traditional major treatments: surgery, which has been used to treat tumors for more than a hundred years; radiotherapy, which has been used for ninety years; and chemotherapy, which has been used for nearly seventy years. In the 1980s, there was the rise of biological therapy and immunotherapy. The effects of oncological therapy have made a lot of progress. Many tumors have achieved good results, but there are still many solid tumors whose efficacy are still very poor. In 1985, the author followed up more than three thousand patients who had undergone the general surgical operation and thorax surgical operation. The results showed that most patients relapsed and metastasized within two to three years after surgery. Some patients even relapsed in a few months. This made me deeply realize that surgery is successful and standardized, but the long-term effect is not satisfied or that the long-term treatment is a failure.
