Written by a veteran of World War II who served aboard a Landing Ship Tank (LST) this book tells the story of the coming together of ninety-day wonder college boys commissioned in the U.S. Navy with a mustang commissioned from the ranks to be its captain and the draftees from the farms and cities to serve their country. In a time of war, fought by an all-volunteer professional army in which little sacrifice is asked for the people on the home front, this book is a necessary reminder of the time when the whole country mobilized in the defense of freedom. The author presents an up-close picture of

the relationships between officers and men, and between the officers and each other and the ranks with each other. Beginning with the news of the Japanese assault on Pearl Harbor and ending with the occupation of Japan, this book presents a vignette of history that historians seldom write about.

The Craft of Wargaming is designed to support supervisors, planners, and analysts who use wargames to support their organizations' missions. The authors focus on providing

analysts and planners with a clear methodology that allows them to initiate, design, develop, conduct, and analyze wargames. Built around the analytic wargaming construct, organizations or individuals can easily adapt this methodology to construct educational and experiential wargames. The book breaks the wargame creation process into five distinct phases: Initiate, Design, Develop, Conduct, and Analyze. For each phase, the authors identify key tasks a wargaming team must address to have a reasonable chance at designing, developing, conducting, and analyzing a successful

wargame. While these five stages are critical to the process of constructing any wargame, it should be understood that the craft of wargaming is learned through active participation, not by reading or watching. This craft must be practiced as part of the learning process, and the included practical exercises provide an opportunity to experience the construction of an analytical wargame. The authors also discuss critical supervisory tasks that are essential to manage the wargaming team's efforts. While the creators are focused on the design and development of the game itself, supervisors

must set conditions for the wargame to be a success (best practices) and beware of the pitfalls that may set the wargame up to fail (worst practices). The book demonstrates using the analytical wargaming framework to create relevant and useful planning wargames. It also reinforces using the analytical wargaming framework for seminar wargames that, without rigor, are useless. The book demonstrates the benefits of using the analytical wargaming process to design educational and experiential games.
