Basic diesel engine wiring checks If the battery passes the voltage tests, loose, dirty or corroded contacts are likely to be reducing the power that reaches the starter, with the energy being lost as heat. Terminals or connections that are hot after cranking the engine for 5-10 seconds are a clear sign of this problem.

~~Marine Enterprises Ltd~~

On most of these panels the entire current of the alternator runs through upwards of 25' of 10GA wire and two ridiculously pathetic trailer type connectors, for this type of load. The undersized wire and trailer connectors trying to pass 45A+ creates a large amount of resistance as these boats age.
