'This book provides an excellent overview of more than a decade of transformation in a forest landscape where the interests of local people, extractive industries and globally important biodiversity are in conflict. The studies assembled here teach us that plans and strategies are fine but, in the real world of the forest frontier, conservation must be based upon negotiation, social learning and an ability to muddle through.' Jeffrey Sayer, senior scientific adviser, Forest Conservation Programme IUCN - International Union for of Nature The devolution of control over the world's forests from national or state and provincial level governments to local control is an ongoing global trend that deeply affects all aspects of forest management, conservation of biodiversity, control over resources, wealth distribution and livelihoods. This powerful new book from leading experts provides an in-depth account of how trends towards increased local governance are shifting control over natural resource management from the state to local societies, and the implications of this control for social justice and the environment. The book is based on ten years of work by a team of researchers in Malinau, Indonesian Borneo, one of the world's richest forest areas. The first part of the book sets the larger context of decentralization's impact on power struggles between the state and society. The authors then cover in detail how the devolution process has occurred in Malinau, the policy context, struggles and conflicts and how Malinau has organized itself. The third part of the book looks at the broader issues of property relations, conflict, local governance and political participation associated with decentralization in Malinau. Importantly, it draws out the salient points for other international contexts including the important determination that 'local political alliances', especially among ethnic minorities, are taking on greater prominence and creating new opportunities to influence forest policy in the world's richest forests from the ground up. This is top-level research for academics and professionals working on forestry, natural resource management, policy and resource economics worldwide. Published with CIFOR

This accessible textbook is the only introduction to linguistics in which each chapter is written by an expert who teaches courses on that topic, ensuring balanced and uniformly excellent coverage of the full range of modern linguistics. Assuming no prior knowledge the text offers a clear introduction to the traditional topics of structural linguistics (theories of sound, form, meaning, and language change), and in addition provides full coverage of contextual linguistics, including separate chapters on discourse, dialect variation, language and culture, and the politics of language. There are also up-to-date separate chapters on language and the brain, computational linguistics, writing, child language acquisition, and second-language learning. The breadth of the textbook makes it ideal for introductory courses on language and linguistics offered by departments of English, sociology, anthropology, and communications, as well as by linguistics departments.

The practice of sex-selective abortion is on the rise globally, stirring debates about gender inequality, medical ethics and reproductive autonomy. This book is the first ethnography to document practices of sex selection in Viet Nam. It shows how and why abortions are used to select the sex of children and how Vietnamese individuals and health professionals are implicated in this illicit and controversial practice. Telling the stories of women who have undergone sex-selective abortions, it traces their passage through sex determination and abortion decision-making phases, and investigates their experiences during and after their sex-selective abortions. It describes the turmoil experienced by individuals who undergo such abortions and explores their interactions with the spectrum of social actors and health institutions that facilitate practices of sex selection. As the first ethnographic study on sex-selective abortions in Viet Nam, this book delves into socially sensitive terrain and sheds light on personally fraught individual experiences of reproductive agency. It documents societal responses to sex-selective abortions in Viet Nam and identifies gaps in the state's capacity to regulate reproductive desire in a marketised economy. A resource for researchers, it contributes to ongoing debates on sex selection and provides a framework for developing relevant social policies, interventions and support services. 'This pioneering study offers a nuanced and sensitive account of sex-selective abortion as human experience. Through thought provoking case studies, the book provides rare ethnographic documentation of the complex quandaries that arise as selective reproductive technologies are routinised across the globe.' — Tine M. Gammeltoft, Department of Anthropology, University of Copenhagen

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Fourteen authors, including many of the best-known scholars in the field, explore how people actually experience their culture and how those experiences are expressed in forms as varied as narrative, literary work, theater, carnival, ritual, reminiscence, and life review. Their studies will be of special interest for anyone working in anthropological theory, symbolic anthropology, and contemporary social and cultural anthropology, and useful as well for other social scientists, folklorists, literary theorists, and philosophers.

Gregory Bateson was a philosopher, anthropologist, photographer, naturalist, and poet, as well as the husband and collaborator of Margaret Mead. This classic anthology of his major work includes a new Foreword by his daughter, Mary Katherine Bateson. 5 line drawings.

Features five tales such as The Tale of the Three Brothers, The Fountain of Fair Fortune, The Warlock's Hairy Heart, The Wizard and the Hopping Pot, and Babbitty Rabbitty and her Cackling Stump.
