With time dwindling but her will to end the Prophecy stronger than ever, Lia sets out on a journey to find the remaining keys, locate the missing pages of the Prophecy, and convince her sister Alice to help--or risk her life trying. Lia has her beloved Dimitri by her side, but Alice has James, the man who once loved her sister--and maybe still does. James doesn't know the truth about either sister, or the prophecy that divides them. And Alice intends to keep it that way. There are some secrets sisters aren't meant to share. Because when they do, it destroys them. This stunning conclusion to Michelle Zink's Prophecy of the Sisters trilogy will make saying good-bye bittersweet for readers.

Prepare for success on respiratory therapy credentialing exams! Updated to reflect the 2009 National Board of Respiratory Care (NBRC) content outlines, Sills' The Comprehensive Respiratory Therapist's Exam Review, 5th Edition helps you review for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you can be sure that you have covered every topic that might appear on the exam. CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

Produced in cooperation with the National Association of School Nurses, this text includes comprehensive coverage of the multiple facets of school nursing—from the foundations of practice and the roles and functions of a school nurse through episodic and chronic illness and behavioral issues, to legal issues and leading and managing within school settings. Written and edited by school nurses and pediatric experts, it features real-world-tested, best practices based on evidence and experience. There's content here that you won't find in other books, such as health assessments, individualized health plan development, mental health conditions including adolescent depression, contemporary legal issues, and current policy statements essential to school nursing.

The study reported in this volume grew out of some theoretical work, one phase of which bore specifically on the behavior of individuals in social movements that made specific (and unfulfilled) prophecies. We had been forced to depend chiefly on historical records to judge the adequacy of our theoretical ideas until we by chance discovered the social movement that we report in this book. At the time we learned of it, the movement was in mid-career but the prophecy about which it was centered had not yet been disconfirmed. We were understandably eager to undertake a study that could test our theoretical ideas under natural conditions. That we were able to do this study was in great measure due to the support

obtained through the Laboratory for Research in Social Relations of the University of Minnesota. This study is a project of the Laboratory and was carried out while we were all members of its staff. We should also like to acknowledge the help we received through a grant-in-aid from the Ford Foundation to one of the authors, a grant that made preliminary exploration of the field situation possible.

This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included.

Education forms a unique dimension of social status, with qualities that make it especially important to health. It influences health in ways that are varied, present at all stages of adult life, cumulative, self-amplifying, and uniformly positive. Educational attainment marks social status at the beginning of adulthood, functioning as the main bridge between the status of one generation and the next, and also as the main avenue of upward mobility. It precedes the other acquired social statuses and substantially influences them, including occupational status, earnings, and personal and household income and wealth. Education creates desirable outcomes because it trains individuals to acquire, evaluate, and use information. It teaches individuals to tap the power of knowledge. Education develops the learned effectiveness that enables self-direction toward any and all values sought, including health. For decades American health sciences has acted as if social status had little bearing on health. The ascendance of clinical medicine within a culture of individualism probably accounts for that omission. But research on chronic diseases over the last half of the twentieth century forced science to think differently about the causes of disease. Despite the institutional and cultural forces focusing medical research on distinctive proximate causes of specific diseases, researchers were forced to look over their shoulders, back toward more distant causes of many diseases. Some fully turned their orientation toward the social status of health, looking for the origins of that cascade of disease and disability flowing daily through clinics. Why is it that people with higher socioeconomic status have better health than lower status individuals? The authors, who are well recognized for their strength in survey research on a broad national scale, draw on findings and ideas from many sciences, including demography, economics, social psychology, and the health sciences. People who are well educated feel in control of their lives, which encourages and enables a healthy lifestyle. In addition, learned effectiveness, a practical end of that education, enables them to find work that is autonomous and creative, thereby promoting good health.
