As Dr Needham's immense undertaking gathers momentum it has been found necessary to subdivide volumes into parts, each bound and published separately. The first two parts of Volume IV deal respectively with the physical sciences and with the diverse applications of physics in the many branches of mechanical engineering. The third deals with civil and hydraulic engineering and with nautical technology.

The stunning story of one of America's great disasters, a preventable tragedy of Gilded Age America, brilliantly told by master historian David McCullough. At the end of the nineteenth century, Johnstown, Pennsylvania, was a booming coal-and-steel town filled with hardworking families striving for a piece of the nation's burgeoning industrial prosperity. In the mountains above Johnstown, an old earth dam had been hastily rebuilt to create a lake for an exclusive summer resort patronized by the tycoons of that same industrial prosperity, among them Andrew Carnegie, Henry Clay Frick, and Andrew Mellon. Despite repeated warnings of possible danger, nothing was done about the dam. Then came May 31, 1889, when the dam burst, sending a wall of water thundering down the mountain, smashing through Johnstown, and killing more than 2,000 people. It was a tragedy that became a national scandal. Graced by David McCullough's remarkable gift for writing richly textured, sympathetic social history, The Johnstown Flood is an absorbing, classic portrait of life in nineteenth-century America, of overweening confidence, of energy, and of tragedy. It also offers a powerful historical lesson for our century and all times: the danger of assuming that because people are in positions of responsibility they are necessarily behaving responsibly.

Debunks cherished theories of mainstream consensus and reveals the deeper mysteries of the science of the unseen • Reveals a new "Theory of Everything" to replace the standard model and complete our knowledge of Earth Science, anthropology, psychology, and spirituality • Explains the fallings of the Big Bang, evolution, ice age theory, and global warming • Shows how the Freudian and Jungian theories of the unconscious have grossly misrepresented the spirit of man and the psyche of humanity What if science and society's most darling theories, taught as fact, were 100% wrong? What if the anomalies that disprove these theories were covered up and distorted and any serious challenges brushed off as lunacy, hysteria, junk science, and dissension? In this primer in deprogramming, Susan B. Martinez reveals the disinformation at the root of mainstream consensus thinking. She punches gaping holes in the cherished theories of the Big Bang, Darwinian evolution, ice ages, and global warming. Drawing on the ancient science of the unseen and revelations from the Oahspe Bible as well as some of the most advanced thinkers in astrophysics, she explains a new "Theory of Everything" to replace the standard model. She explores the concept of vortexya, the cosmic whirlwind of our own geomagnetic field, which explains quite simply the subtle changes that take place on Earth and in the universe over time without the "magical thinking" of the Big Bang, global warming, or ice ages. Martinez reveals how the instability of society itself has found its way into our theories, positing explosive change and acceleration where there is none. She explains how homo sapiens' evolution did not suddenly accelerate 40,000 years ago and culture did not accelerate to birth civilization a mere 6,000 years ago. She shows how the theories of the Freudian and Jungian unconscious and of reincarnation have grossly misrepresented the spirit of man and the psyche of humanity. Resurrecting the majestic order that was once recognized at the basis of reality, Martinez shows that the shift from the Age of Disinformation to the Age of Understanding is well underway.
