Machines make everyday life easier! Do you know that building your own machine is simpler than you think? Learn about two simple machines, the lever and pulley. See science at work in the real world and use what you learn to figure out how to get a 700-pound piano to the second story of a building! Includes a note to caregivers, a glossary, a discover activity, and career connections, as well as connections to science history.

Introduces six simple machines, describing how they work in more complex machinery and how they are used every day.

The Technic models in "Simple Machines" demonstrate basic configurations of gears, shafts, pulleys, turntables, connectors, and the like and show readers how to create small, elegant machines like cranes, operable doors, motorized cars, a rubber band-powered rocket launcher, a hand-cranked drag racer, and even musical instruments.

Only elementary math skills are needed to follow this manual, which covers many machines and their components, including hydrostatics and hydraulics, internal combustion engines, trains, and more. 204 black-and-white illustrations.

The LEGO® MINDSTORMS® EV3 Idea Book explores dozens of creative ways to build amazing mechanisms with the LEGO MINDSTORMS EV3 set. Each model includes a list of the required parts, minimal text, and colorful photographs from multiple angles so you can re-create it without the need for step-by-step instructions. You ' ll learn to build cars with real suspension, steerable crawlers, ball-shooters, grasping robotic arms, and other creative marvels. Each model demonstrates simple mechanical principles that you can use as building blocks for your own creations. Best of all, every part you need to build these machines comes in one LEGO set (#31313)!

Building a fort in the backyard, a grandfather and granddaughter get help from six simple machines: lever, pulley, inclined plane, wheel and axle, screw, and wedge.

EL Education's ELA Curriculum combines rigorous, standards-aligned content with effective instructional practice. Developed by teachers for teachers, the curriculum draws on EL Education's 20 years of experience to engage teachers and students in active learning every day. It covers 160 days of instruction across a school year, developed down to the level of daily lessons, and addresses a full year of English Language Arts instruction in four modules. Students get excited about learning through authentic texts, compelling topics and ownership of their own learning. Teachers get a vision of the instructional practices that support a standards-aligned classroom and the tools to create it. Originally commissioned by New York State when EL Education went by the name Expeditionary Learning, the version of the ELA curriculum posted on New York's Engage NY website has been downloaded over 6 million times. In Grade 4: Module 3A, a New York State Learning Standards-aligned module, students build knowledge of simple machines and how they impact force, effort, and work. Students work in small groups to read about specific simple machines (inclined plane, levers, pulleys, etc.) as well as reading and conducting a series of science experiments using simple machines. At the end of the module, they write an editorial to be submitted to a fictitious engineering magazine, expressing an opinion about which simple machine benefits people the most in their everyday lives. A complete set of materials for Grade 4: Module 3A should include the Teacher Guides (978-1683621782), one Student Workbook (978-1683621829) per student, and the required trade books for this module. For more information, go to <http://commoncoresuccess.ededucation.org/>.

Simple machines are around us all the time and we use them every day. You might not even think of them as machines. Many are built into complex (compound) machines – but the simple machine is still in there, doing its job. Learn about how simple machines enable practically everything around us to work, allowing us to travel in wheeled vehicles, lift very heavy objects, fix things together and break things apart. *You Wouldn't Want to Live Without Simple Machines!* is part of a brand-new science and technology strand within the internationally acclaimed *You Wouldn't Want to Be* series. The clear, engaging text and humorous illustrations bring the subject to life and stimulate young readers' curiosity about the world around them. Specially commissioned cartoon-style illustrations in full colour make these books attractive and accessible even to reluctant readers. Information is conveyed through captions, labels and humorous speech bubbles in addition to the main text. Illustrated sidebars headed ' How It Works ', ' Top Tip ' or ' You Can Do It ' supply more facts, describe simple, safe experiments, or steps that readers can take to help make the world a better place. Each volume includes a timeline and a list of ' Did You Know? ' facts.
