Proof: Someone is trying to kill Petrovitch and they're willing to sink the whole city to do it.

Faced with the choice of starting a company or joining a large corporation, Steve Jobs believed that it was 'more fun to be a pirate than to join the navy'. It is the management of the core business that tends to get in the way of innovation. Most intrapreneurs recognise that innovation can't be carried out as a series of one-off projects that always have to jump through political hurdles. They realise

When a bad day at work culminates in losing out on a promotion, Jim Sanders shifts into his animal form to let off steam. Then his bad day turns into a bad night-while prowling his Atlantic City neighborhood as a large gray house cat, he's caught in a torrential downpour. What little luck he has washes down the gutter when his new boss, Andrew Wright, catches him taking shelter on his porch, brings him inside, and starts calling him Mr. Frosty. Finding love was never part of Jim's plan for the future-not with his bizarre secret-yet suddenly he finds himself navigating that minefield anyway. But not everything is easy, especially for an interracial gay couple dealing with prejudice in the workplace, at Tony's school, and even within their own families.

"Victor Burgin examines a kaleidoscope of film fragments drawn from a variety of media as well as the Internet, memory and fantasy. Among these are sequences of such brevity they might almost be stills. Such 'sequence-images', as Burgin calls them, are neither strictly 'image' nor 'image-sequence' and have not been addressed hitherto either by film or photography theory. He considers these through some typical individual experiences - reflecting on such disparate occurrences as the association in memory of fragments from otherwise unrelated films, of the relation of a recollected film image to an architectural setting, or of feeling 'marked' by an image remembered from a film."--Jacquette

This book offers an excellent and practically oriented introduction to the basic concepts of modern circuit theory. It builds a thorough and rigorous understanding of the analysis techniques of electric networks, and also explains the essential procedures involved in the synthesis of passive networks. Written specifically to meet the needs of undergraduate students of electrical and electronics engineering, electronics and communication engineering, instrumentation and control engineering, and computer science and engineering, the book provides modularized coverage of the full spectrum of network theory suitable for a one-semester course. A balanced emphasis on conceptual understanding and problem-solving helps students master the basic principles and properties that govern circuit behaviour. A large number of solved examples show students the step-by-step processes for applying the techniques presented in the text. A variety of exercises with answers at the chapter ends allow students to practice the solution methods. Besides students pursuing courses in engineering, the book is also suitable for self-study by those preparing for AMIE and competitive examinations. An objective-type question bank at the end of book is designed to see how well the students have mastered the material presented in the text.
