Tyler Wallace continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Beginning and Intermediate Algebra. leads students to mastery and success. The exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

The contributions in this volume suggest that "the ethics project in legal education" is increasingly an international one. Even though the strength of commitment by both the profession and the legal academy to "ethics learning" within law schools varies, two

fundamental questions confront all who work in this area. First, what is it that we want our students to learn (or, perhaps, in what manner do we want our students to develop) from the teaching of "legal ethics"? Second, how can we create a learning environment that will encourage the nature and quality of learning we think is important? All the contributors to this volume take a strong stand on the importance of ethical legal practice and the role of law schools in developing students' capacities in this area. They share a belief in the essential need to encourage law students to engage with the moral dimensions of legal practice. The questions that these scholars grapple with are therefore not of the "should we be teaching this?" variety, but "how might we best to go about doing this, so that our efforts within law schools really make some difference?" Each of the chapters in this volume adds uniquely to

capacity for building social professional practice related to technology-enriched teaching and learning (TETL) specific, but not limited to, educational settings. This book comes at a time when many in education are struggling to provide a technology enriched learning experience for students who are entering classrooms with high expectations for such an experience. The focus on the protective factors and identified resilient professional practices, instead of on well documented and commonly cited risk factors and barriers that impede the effective integration of TETL, represents a distinguishing feature of this work. By attempting to better understand and document how two schools that were classified as resilient in their use of technology have been able to overcome risk factors (e.g., budgetary constraints, a lack of resources, a lack of training, technological support issues), this book will offer the
