The use of dredged material islands by colonial nesting seabirds and wading birds in New Jersey was examined in five major phases. The first located dredged material islands from Manasquan to Cape May Inlets, NJ; the second recorded the past history of all colonial nesting seabirds and wading birds in New Jersey; the third recorded the vegetation patterns and succession on 21 dredged material islands selected for intensive study; the fourth recorded the distribution in 1977 of colonial seabirds and wading birds in the study area and their utilization of dredged material islands; and the fifth documented those factors influencing the use and selection of dredged material islands by birds in 1977. Nineteen management recommendations for dredged material islands are stated, including annual wildlife surveys, careful monitoring of contractor performance, attention to record keeping, preservation of alternative colony sites, rotational use and management of dredged material islands, proportional habitat creation and management, and protection of all islands with bird colonies.

This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning, held 21-23 September 2016 at Clayton Hotel in Belfast, UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general, but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning, with a focus on collaborative learning. Today the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings, and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning.

Island of the Blue Dolphins is the true story of a young girl's survival alone on a secluded island. Karana makes a choice between leaving with her village people on a rescue ship or swimming back to her island home to save her younger brother, Ramo. There, Karana battles harsh environments and hostile wildlife. Her isolation from humans teaches her how to co-exist peacefully with the wildlife on the island and the sea. For nearly eighteen years, Karana learns how to hunt, cook and clothe herself while surviving the harsh winters on the island. Finally, Karana is discovered by travelling missionaries and is taken off the island. This Novel Study provides a teacher and student section with a variety of activities, discussion questions and answer key to create a well-rounded lesson plan.
