A riveting chronicle of scientific history recounts the race among three great titans of the Gilded Age--inventor Thomas Alva Edison, creator of the incandescent light bulb; eccentric genius Nikola Tesla; and George Westinghouse, a tough entrepreneur and powerful empire builder--to bring electricity to the world. Reader's Guide available. Reprint. 17,500 first printing.

The spellbinding true account of the scientific competition to light the world with electricity. In the mid-to-late-nineteenth century, a burgeoning science called electricity promised to shine new light on a rousing nation. Inventive and ambitious minds were hard at work. Soon that spark was fanned, and a fiery war was under way to be the first to light--and run--the world with electricity. Thomas Alva Edison, the inventor of direct current (DC), engaged in a brutal battle with Nikola Tesla and George Westinghouse, the inventors of alternating current (AC). There would be no ties in this race--only a winner and a loser. The prize: a nationwide monopoly in electric current. Brimming with action, suspense, and rich historical and biographical information about these brilliant inventors, here is the rousing account of one of the world's defining scientific competitions. A Christy Ottaviano Book

This is a survival booklet for those who live in earthquake active zones. The information is especially applicable to US citizens who live in California, Oregon, Washington and Alaska and Hawaii. The cities of Memphis and Saint Louis are also sitting in active zones and they are not as prepared for ground motion that topples buildings and freeways as the people in California are prepared. Oklahoma and Texas have been having unnatural earth movements, but for now it seems unlikely a magnitude 6.5 or greater quake will occur in cities in those states. The language is plain and easy to understand. The book is not written to frighten anyone. It is written to help save lives with careful early planning. It should be in libraries for reference.

Chance-Vought;s F7U Cutlass was inspired by design data retrieved from Germany;s Arado Company at the end of WWII. To avoid extreme nose-down forces, the Cutlass was a tail-less; aircraft. Its swept wings had vertical fins and ailerator; control surfaces. Although intended to operate at up to Mach .95, the aircraft was hampered by under- powered Westinghouse turbojets, and its nose-up profile made carrier landings dangerous. Although its in-flight performance was acceptable, the Navy initially rejected the plane as unfit for carrier use. While nearly 200 F7U-3s were eventually delivered, they were retired only five years after their introduction. Originally printed by the U.S. Navy, this F7U-3 Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Classified Restricted;, it was recently de- classified and is here reprinted in book form. This facsimile has been reformatted. Care has been taken however to preserve the integrity of the text.

Time capsules have been used for thousands of years to store for posterity a selection of objects thought to be representative of life at a particular time. Such vessels have the dual purpose of causing participants to ponder their own cultural era and think about those to come. This work is a cultural history of five thousand years of time capsules and other related time-information transfer experiences. It examines both the formal and the popular culture aspects of the time capsule, from its roots in ancient Mesopotamia and Egyptian building foundation deposits to the present utilization of spacecraft probes and other extreme locations. The deposits of 3000 BCE deliberately had no definite date and time to be opened; in 1876 CE came the idea of target-dated deposits. Also discussed are how "real" time capsules work, national and archaeological time capsules, the height of the time capsule's popularity from 1935 to 1982, the preservation of writings in time capsules, keeping time in a perpetual futurescape, and turn of the century hype surrounding millennium time capsules.

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

A witty, informative guide to writing from Random House's longtime copy chief and one of Twitter's leading language gurus--a twenty-first-century Elements of Style. We're all of us writers: We write term papers and office memos, letters to teachers and product reviews, appeals to politicians, journals, and blog entries. Some of us write books. All of us write emails. And we all want to write them better: We want to make our points more clearly, more elegantly; we want our writing to be appreciated, to be more effective; we want--to be quite honest--to make fewer mistakes. Benjamin Dreyer is here to help. As authoritative as it is amusing, Dreyer's English distills everything Random House copy chief Benjamin Dreyer has learned from the scores of books he has copyedited into a useful guide not just for writers but for everyone who wants to put their best foot forward in writing prose. Dreyer offers lessons on the ins and outs of punctuation and grammar, including how to navigate the words he calls the confusables, such as tricky homophones; the myriad ways to use (and misuse) a comma; and how to recognize--though not necessarily do away with--the passive voice. People are sharing their writing more than ever and this book lays out, clearly and comprehensibly, everything writers can do to keep readers focused on the real reason writers write: to communicate their ideas clearly and effectively. Checkful of advice, insider wisdom, and fun facts on the rules (and nonrules) of the English language, this book will prove invaluable to everyone who wants to shore up their writing skills, mandatory for people who spend their time editing and shaping other people's prose, and--perhaps best of all--an utter treat for anyone who simply revels in language.
