Roy Underhill brings to woodworking the intimate relationship with wood that craftsmen enjoyed in the days before power tools. Combining historical background, folklore, alternative technology, and humor, he provides both a source of general information and a detailed introduction to traditional woodworking. Beginning with a guide to trees and tools, The Woodwright's Shop includes chapters on gluts and mauls, shaving horses, rakes, chairs, weaving wood, hay forks, dough bowls, lathes, blacksmithing, dovetails, panel-frame construction, log houses, and timber-frame construction. More than 330 photographs illustrate the text.

Wood bending is intriguing to the vast majority of woodworkers, but until now most have not had access to the information they need to add it to their repertoire. This highly visual book and DVD changes that. It features step-by-step instruction on some of the most common techniques. Expert Lon Schleinig explains and demonstrates both steam bending (where steam relaxes wood fibers so they can be shaped when clamped to a bending form) and bent lamination (where thin strips of wood are glued together, then clamped to a bending form). Schleinig shows just how easy it can be to master these techniques, even using relatively low-tech equipment.
